

# MONTHLY TIP

## Check Your Filters!

With the change in seasons, a reminder to have your furnace and/or air conditioner filters checked. Changing furnace and return air filters is critical to the proper performance of your HVAC system, not to mention your home's air quality. It's easy to do and you'll breathe a little easier.

### What can YOU do to help?

1. Check your air conditioner and furnace filters regularly. Whenever they are dirty, replace them.
2. When you replace a filter, write the current date on the edge/frame of the new filter so you know how long it has been in operation.
3. Clean the fins and coils on your outside air conditioner condenser. Even a simple hose with a strong stream on your outside air condenser coils will remove dirt & salt deposits, making your unit last longer.
4. You may also wish to look into one of new smart thermostats to help you save on energy use.
